Invisible Solar Power
ISP option

Where quality meets beauty

Elegance at its best

The top SP Solbian series can be offered with a completely new look. A masking layer placed over the solar cells changes the visual appearance of the solar panel, but keeping the high efficiency of back-contact cells largely unaffected. Solbian panels, beyond being easy to integrate, powerful and reliable, will also contribute to the elegance of your boat, caravan, house.

Endless possibilities

Thanks to different masking technologies a rich portfolio of graphics will change your idea of solar panel. Solid colors, materials, geometric patterns; the ISP option broadens the meaning of customization in the solar field.
